

COMPREHENSIVE
PROTECTION
OF YOUR PORTABLE
STORAGE MEDIA

TrustPort USB ANTIVIRUS

EDITION 2010

Mobile storage media is a common means of transferring files between multiple computers. However equally common is the lack of security products that protect this media. This means they often become a source of viral infections, which unfortunately cause data loss of confidential files.

Your flash drive deserves the same protection as your computer.

- Will not allow copying of viruses to your flash drive
- Encrypts files against unauthorized access
- Shreds no longer needed private files
- Able to scan any host computer on-demand

AWARDS

Documents, photos, videos, or other files that you have stored on your flash drive may come into the wrong hands in case of loss. When working with multiple computers, viral infections can also easily infiltrate your flash drive. Choose the solution that will reliably protect your flash drive against all malicious codes, and that will protect your files from unauthorized reading. Choose TrustPort USB Antivirus.

destruction of confidential documents

New

New

COMPREHENSIVE PROTECTION

of your portable storage media.

Resident protection

means continuous monitoring of the flash drive against malicious codes transferred from the host computer. This means you do not have to worry about the quality of the security on the host computer, for example in public places.

On demand scanning

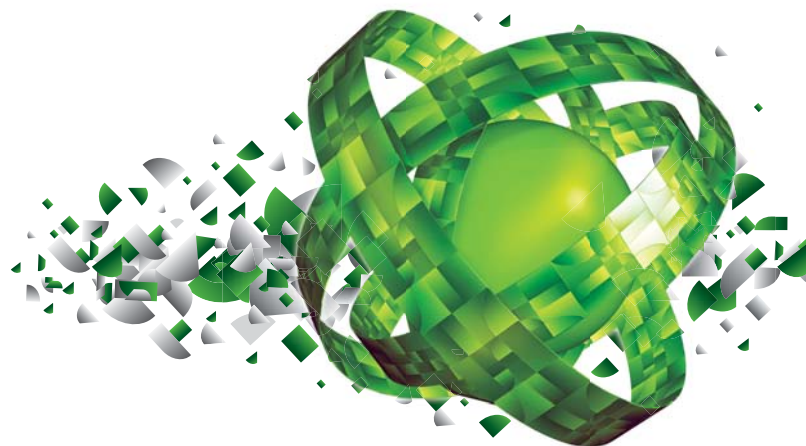

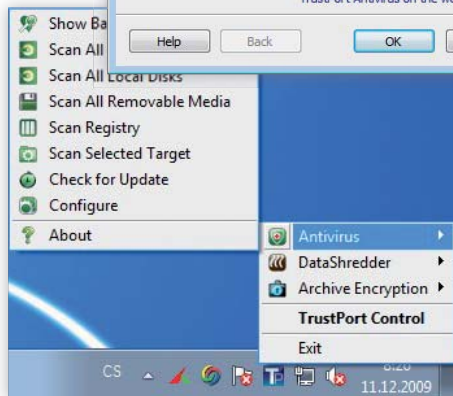

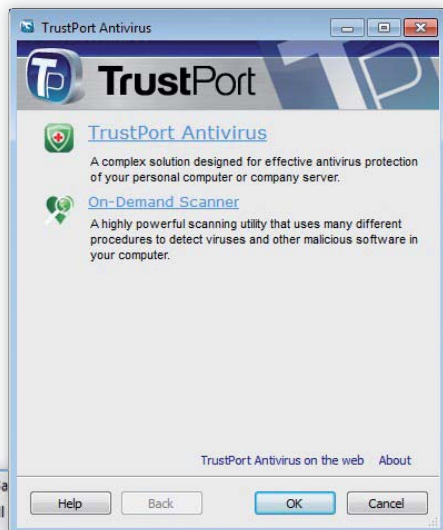

enables the user to scan selected files, folders, or drives on the host computer. In case of problems with viruses, one can easily find the origin of the infection.

Archive Encryption

allows you to save your work or personal files in encrypted archives. This protects them against possible abuse in the unfortunate event of loss, or theft of your flash drive.

Data Shredder

gives you the opportunity to irrevocably shred no longer needed or confidential files. This will not allow any unauthorized restoring of files.

SUPPORTED PLATFORMS:

Windows 2000, Windows XP, Windows Vista, Windows 7
Full compatibility with 32-bit and 64-bit systems!
